Introduction	ix
1. Preliminaries	1
I. MODEL ELLIPTIC PROBLEMS	
2. Introduction	7
3. Classical and weak solutions	7
4. Isolated singularities	12
5. Pohozaev's identity and nonexistence results	18
6. Homogeneous nonlinearities	20
7. Minimax methods	29
8. Liouville-type results	36
9. Positive radial solutions of $\Delta u + u^p = 0$ in $\mathbb{R}^n$	50
10. A priori bounds via the method of Hardy-Sobolev inequalities	55
11. A priori bounds via bootstrap in L^p_δ -spaces	61
12. A priori bounds via the rescaling method	65
13. A priori bounds via moving planes and Pohozaev's identity	68
II. MODEL PARABOLIC PROBLEMS	
14. Introduction	75
15. Well-posedness in Lebesgue spaces	75
16. Maximal existence time. Uniform bounds from L^q -estimates	87
17. Blow-up	91
18. Fujita-type results	100
19. Global existence for the Dirichlet problem	112
1. Small data global solutions	112
2. Structure of global solutions in bounded domains	120
3. Diffusion eliminating blow-up	125
20. Global existence for the Cauchy problem	129
1. Small data global solutions	129
2. Global solutions with exponential spatial decay	137
3. Asymptotic profiles for small data solutions	139
21. Parabolic Liouville-type results	150
22. A priori bounds	161
1. A priori bounds in the subcritical case	161
2. Boundedness of global solutions in the supercritical case	166
3. Global unbounded solutions in the critical case	171
4. Estimates for nonglobal solutions	175

23. Blow-up rate	177
24. Blow-up set and space profile	190
25. Self-similar blow-up behavior	195
26. Universal bounds and initial blow-up rates	202
27. Complete blow-up	218
28. Applications of a priori bounds	230
1. A nonuniqueness result	230
2. Existence of periodic solutions	234
3. Existence of optimal controls	236
4. Transition from global existence to blow-up and stationary solutions	237
5. Decay of the threshold solution of the Cauchy problem	239
29. Decay and grow-up of threshold solutions in the super-supercritical case	245

III. SYSTEMS

30. Introduction	251
31. Elliptic systems	251
1. A priori bounds by the method of moving planes and Pohozaev-type identities	253
2. Liouville-type results for the Lane-Emden system	260
3. A priori bounds by the rescaling method	263
4. A priori bounds by the L^p_δ alternate bootstrap method	266
32. Parabolic systems coupled by power source terms	272
1. Well-posedness and continuation in Lebesgue spaces	273
2. Blow-up and global existence	278
3. Fujita-type results	280
4. Blow-up asymptotics	283
33. The role of diffusion in blow-up	287
1. Diffusion preserving global existence	288
2. Diffusion inducing blow-up	301
3. Diffusion eliminating blow-up	311

IV. EQUATIONS WITH GRADIENT TERMS

34. Introduction	313
35. Well-posedness and gradient bounds	314
36. Perturbations of the model problem: blow-up and global existence	319
37. Fujita-type results	330
38. A priori bounds and blow-up rates	338
39. Blow-up sets and profiles	348

40. Viscous Hamilton-Jacobi equations and gradient blow-up on the boundary	355
1. Gradient blow-up and global existence	355
2. Asymptotic behavior of global solutions	358
3. Space profile of gradient blow-up	364
4. Time rate of gradient blow-up	367
41. An example of interior gradient blow-up	374

V. NONLOCAL PROBLEMS

42. Introduction	377
43. Problems involving space integrals (I)	377
1. Blow-up and global existence	378
2. Blow-up rates, sets and profiles	381
3. Uniform bounds from L^q -estimates	394
4. Universal bounds for global solutions	395
44. Problems involving space integrals (II)	398
1. Transition from single-point to global blow-up	398
2. A problem with control of mass	403
3. A problem with variational structure	411
4. A problem arising in the modeling of Ohmic heating	412
45. Fujita-type results for problems involving space integrals	418
46. A problem with memory term	421
1. Blow-up and global existence	422
2. Blow-up rate	424

APPENDICES

47. Appendix A: Linear elliptic equations	429
1. Elliptic regularity	429
2. L^p - L^q -estimates	431
3. An elliptic operator in a weighted Lebesgue space	434
48. Appendix B: Linear parabolic equations	438
1. Parabolic regularity	438
2. Heat semigroup, L^p - L^q -estimates, decay, gradient estimates	439
3. Weak and integral solutions	443
49. Appendix C: Linear theory in L^p_δ -spaces and in uniformly local spaces	447
1. The Laplace equation in L^p_δ -spaces	447
2. The heat semigroup in L^p_δ -spaces	450
3. Some pointwise boundary estimates for the heat equation	452
4. Proof of Theorems 49.2, 49.3 and 49.7	456
5. The heat equation in uniformly local Lebesgue spaces	460

50. Appendix D: Poincaré, Hardy-Sobolev, and other useful inequalities	462
1. Basic inequalities	462
2. The Poincaré inequality	463
3. Hardy and Hardy-Sobolev inequalities	465
51. Appendix E: Local existence, regularity and stability for semilinear para- bolic problems	466
1. Analytic semigroups and interpolation spaces	466
2. Local existence and regularity for regular data	470
3. Stability of equilibria	485
4. Self-adjoint generators with compact resolvent	488
5. Singular initial data	495
6. Uniform bounds from L^q -estimates	505
52. Appendix F: Maximum and comparison principles. Zero number	507
1. Maximum principles for the Laplace equation	507
2. Comparison principles for classical and strong solutions	509
3. Comparison principles via the Stampacchia method	512
4. Comparison principles via duality arguments	515
5. Monotonicity of radial solutions	518
6. Monotonicity of solutions in time	520
7. Systems and nonlocal problems	522
8. Zero number	526
53. Appendix G: Dynamical systems	528
54. Appendix H: Methodological notes	532
 Bibliography	 543
List of Symbols	577
Index	579

Superlinear Parabolic Problems

Blow-up, Global Existence and Steady States

Quittner, P.; Souplet, P.

2007, XI, 584 p., Hardcover

ISBN: 978-3-7643-8441-8

A Birkhäuser book
