

R developer (paid internship)

You would be part of our development team responsible for implementation of Zurich's Internal Capital Model. You will work closely with quantitative analysts in Group Risk Management located in Zurich and ICM Production team located in Bratislava. The objective of this role is to further develop the Internal Capital Model implementation and to assure its productive readiness.

Your responsibilities would involve:

- Programming support of new developments within an Agile Team,
- A rich code-base for you to learn from, document and maintain,
- A place for you to present your ideas for systems innovation,
- Close work with business analysts & quantitative analysts,
- Environment for you to demonstrate your expert analytical and coding skills,
- Opportunity to test the product in a controlled environment prior to going live.

Requirements:

- University student of Mathematics, Computer science or similar field,
- Willingness to learn and embrace career as a developer,
- Fluent in English,
- Interest in long-term internship with start day in June or July.
